ABOUT ME

Software developer specializing in web applications, with experience in building digital solutions aimed at optimizing processes and improving user experience. I have participated in real projects where I transformed manual processes into efficient systems, working on both frontend development and integration with backend services.

I am known for my practical approach, adaptability, and collaborative work in agile environments, providing clear, scalable solutions aligned with business needs.

PROFESSIONAL EXPERIENCE

Web Developer
Sinfony - 2025

I worked as a web developer, participating in the execution of projects focused on the digital transformation of internal processes, from requirements analysis to the implementation of functional solutions. My work focused on converting manual workflows into efficient digital systems, integrating views and services that facilitated the management and consultation of information.

- Digitization of manual processes using web solutions.
- Development of services for managing and consulting files in local and cloud environments.
- Implementation of dynamic reports with information filters.

Freelancer
2024

Freelance web developer, I develop personal projects and customized solutions for local clients, ranging from scope definition to the implementation of functional, business-oriented products.

FrontEnd Developer (Trainee)
Makaia - 2023

I joined the company as an apprentice in the front-end development bootcamp, participating in an intensive training and practical application process. As my final project, I developed an institutional platform for academic content management, applying the knowledge I had acquired throughout the program.

Technical Support
Venta Equipos Bogotá - 2022

I performed technical support tasks, providing maintenance and assistance to the institution's computer equipment, contributing to its proper functioning and extending its useful life.

- Diagnosis and preventive and corrective maintenance of computer equipment.
- Technical support to users for the resolution of operational incidents.
